55 year old man with obscure occult gastrointestinal bleeding. Drop in hemoglobin 4g and guiac positive stool. Normal endoscopy and colonoscopy

PATIENT DATA

First Gastric Image:	Time: N/A, Frame: N/A
First Duodenal Image:	Time: 00:00:00, Frame: 1
First Cecal Image:	Time: N/A, Frame: N/A
Gastric Transit Time:	N/A
Small Bowel Transit Time:	N/A
Bowel Preparation:	[Not Specified]

DESCRIPTION OF PROCEDURE

After following pre-procedure prep protocol, informed consent was provided to the patient explaining the risks, benefits and possible complications of CapsoCam Plus capsule endoscopy. The patient expressed understanding and agreed to undergo the procedure. Informed consent was signed and obtained. The patient was brought to the practice and swallowed the capsule and the patient swallowed the capsule without complications.

FINDINGS SUMMARY

Capsule with good view of bowel to cecum. Good preparation. Multiple small bowel tumors identified. Ulceration with active bleeding.

RECOMMENDATION

Differential diagnosis includes lymphoma, multifocal gist, polyposis syndrome unlikely. Recommend CT enterography to evaluate location. Double ballon enteroscopy for tissue diagnosis likely next step.
